H-polarized Plane Wave Diffraction by an Acute-angled Dielectric Wedge: A Time Domain Solution 762
Calculation of the Reflection and Transmission of Finite Sized Beams through Layered Uniaxial Anisotropic Media Accelerated by Plane Wave Spectrum Algorithm ......................................................................................................................... 766
Impact on the Performance of Compact Antenna Test Range due to Surface Deviation of the Reflector 771
Electromagnetic Waves Described with the Complex Quaternion .............................................. 776
Methods for the Sensing and Evaluation of Ionosphere Changes and Their Impact on the Human Organism .................................................................................. 781
Applications of Noise Spectroscopy in the Analysis of Periodic Material Structures ................ 787
A Tunable Microwave Absorber Based on Active Frequency Selective Surface .................. 791
Nonreciprocal Perfect Absorber Consisting of Nonlinear Plasma and Matching Metamaterials 794
Minimum Variance Variable Constrain DOA Algorithm ......................................................... 798
Electrical Engineering Education Systems in Finnish and Chinese Universities .................... 804
Practices and Explorations on Introducing New Scientific Research Achievements into Electromagnetics Teaching for Undergraduates ................................................................. 808
Random Distributed Feedback Fiber Laser Employing Erbium-doped Fibers ...................... 812
Random Laser with Er/Yb-codoped Fiber Grating ................................................................. 815
High-performance Microcavity Optical Sensor Connected with a Waveguide ..................... 818
Thermally-tuned Silicon Double Ring Resonator for External Cavity Tunable Laser ............. 822
Homogenizations of Micropolar Elastic Metamaterial Using Field Averaging ..................... 826
Highly Hygroscopic Polymer Microcavity Fiber Fizeau Interferometer for Humidity Sensing .. 831
Optical Fiber Flowmeter Using Silver-coated FBG Cascaded by Waist-enlarged Bitaper ........ 835
An Efficient Regenerator and Wavelength Assignment Approach for 1 + 1 : 1 and 1 : 1 : 1 Protected Lightpath Services ........................................................................................................ 839
Towards a Framework for Small-cell Network Planning ......................................................... 844
Availability Analysis for Elastic Optical Networks with Multi-path Virtual Concatenation Technique .......................................................... 849
Optimal Time-dependent Spectrum Sharing between Neighboring Channels in Elastic Optical Networks .......................................................................................................................... 856
Development of Low Noise MI Sensor and Its Applications .................................................... 860
Test-production of High Sensitivity Multi-core MI Element and Its Characteristics ............. 863
Arousal Effect of ELF Magnetic Stimulus on Car Driver’s Spine Evaluated with Occipital Electroencephalogram and Back Magneto-cardiogram ......................................................... 867
Detection of Back Magneto-cardiogram for Heart Disease Using Pico-Tesla Resolution Amorphous Wire Magneto-Impedance Sensor ............................................................................ 871
Promotion Rate Index in ELF Magneto-protonics .................................................................... 875
Rectangular DRA Reflectarray with an Inclined Top-loading Microstrip Patch .................... 878
A Compact Triple-band MIMO Antenna for Wimax/WLAN Application ............................. 882
On Frequency Optimization of Assymetric Resonant Inductive Coupling Wireless Power Transfer Links .................................................................................................................. 885
Application of Backscattering Models in Active-passive Microwave Remote Sensing of Ocean Salinity .......................................................... 890
Development of a Radiative Transfer Model for the Soil Media with Including Vertical Profile Effects and Its Application in AMSR2 ............................................................. 894
Guided-mode Resonance Enhanced Near-infrared-to-visible Upconversion Fluorescence in a Resonant Waveguide Grating .................................................................................... 897
Novel Tunable Multi-passband Microwave Photonic Filters Based on Fiber Mach-Zehnder Interferometer and Fiber Delay Lines ................................................................. 902
New Scaling of Electron Thermionic Emission from Single-layer Graphene .................... 906
1 Gbps Directed Optical Decoder Based on Two Cascaded Microring Resonators ........... 909
All-optical Wavelength Conversion Using Optical Injection Induced Wavelength Switching in V-cavity Laser ................................................................................................. 915
Ultracompact Adiabatic Tapered Coupler for the Si/III-V Heterogeneous Integration ........ 920
Tunable Rejections of Metamaterial Filter Based on Spoof Surface Plasmon Polaritons ........ 925
A Planar Broadband Metamaterial Absorber with the Polarization Insensitive and Omnidirectional Absorption in the Min-infrared Regime ..................................................... 928
Efficient Generation of Second Harmonic from a Kind of Nonlinear Magnetic Metamaterial Composite ...................................................................................................................... 933
Design and Fabrication of Acoustic Rotator Based on Extremely-anisotropic Metamaterials ... 938
A Wideband Wide-angle Polarization-insensitive Metamaterial Absorber ......................... 941
Design and Analysis of a Wideband Metamaterial Absorber Applied to Radome ............. 944
Preliminary Experimental Results along a Horizontal Path for Adaptive Rate-controlled FSO ........................................ 948
A Transmission-typed Broadband Absorber ............................................................... 952
Realization of XOR and OR Logic Gate with One Configuration in the Two-dimensional Photonic Crystals ................................................................. 956
Low Reflectance GaAs Nano-cones Fabricated by Colloidal Lithography for Solar Cells ......................... 959
Experimental Analysis of Thin Graphite Periodic Structures in the THz Band ................................. 963
Analysis, Design and Simulation of a Compact Wide Band VHF High Power Tubular Band Pass Filter 966
Analysis, Design and Implementation of a Broadband Coaxial-to-microstrip Transition for UWB Radars ................................................................. 972
A Broadband UHF RFID Tag Antenna with a Novel T-matching Network .................................. 978
Capacitively Coupled-fed Electrically Small Loop Antenna with High Efficiency for WiFi Application 982
25 G/s Passive Current Board Design of PRBS Generator ..................................................... 986
A Quasi-hexagon Shaped Band-stop FSS in Wideband RCS Reduction ........................................ 990
A Spiral Antenna with Integrated Planar Feeding Structure ..................................................... 994
A Novel Compact UWB Antenna with Triple Band-notched Characteristics ................................. 997
Quasi-coherent Noise Jamming Based on Interrupted-sampling and Pseudo-random Serials Phase-modulation ................................................................. 1001
Validation Analysis and Test of Semiconductor Device Simulator GSRES .................................... 1006
A Triple-band Planar Inverted-F Antenna for WLAN Application .................................................. 1012
Design and Implementation of a New One Layer Microstrip Antenna Array with CSC2 Pattern for SSR ................................................................. 1016
A Simple Minimized Polarization Reconfigurable Slot Antenna ..................................................... 1021
Microwave Radiation Interferometry High Resolution Reconstruction Based on Mixed Orthogonal Basis 1027
Stereo-SAR Technique without Using Control Points to Estimate Terrain Height ......................... 1032
Detection of Selected Chemical Substances by Means of Nuclear Quadrupole Resonance ................................. 1036
Subsurface Imaging 3-D Objects in Multilayered Media by Using Electromagnetic Inverse Scattering Series Method (EISSM) .................................................. 1041
Data Acquisition System for Body-to-body Radio Communication Channel ................................. 1046
Beam Switching Antenna ........................................................................................................ 1050
A Wideband Metamaterial Absorber Based on Multilayer Rings and Lumped Resistors .................. 1053
Self-reconstruction and Rectification of Non-diffracting Beams after Focusing ............................ 1057
An Improved Method of Diagnosis of Failed Elements in Arrays Using Genetic Algorithm .................. 1061
Design of a C-band Coaxial Cavity Band Pass Filter .................................................................. 1065
Three-component Decomposition for Polarimetric SAR Images Based on Coherency Matrix ........... 1069
An Improved Model-based Polarimetric Decomposition Preserving Dominant Scattering Characteristics 1073
A Method for Pose Estimation of Ship Target from SAR ROI Based on Ellipse Fitting .................. 1077
Design of a Doherty Power Amplifier for Performance Enhancement ........................................... 1082
Application of the Method of Fresnel Zone Analysis in Base Station Location Survey .................. 1086
A Novel Mutual Coupling Matrix Monitoring Method in Two Dimensional Rectangle Antenna Array 1090
Multiband THz Metamaterial Absorber Based on Snowflake-type Resonators ............................... 1093
Analysis and Design of Multi-band Absorber with Periodic Three-dimensional Square Ring Units ..... 1097
Electromagnetic Scattering Controlling for a Rectangular Groove with High Impedance Surfaces Loading .................................................................................. 1101
A Novel Tri-band Patch Antenna Based on Complementary Triangle Split Ring Resonator Pair ........ 1106
Electromagnetic Force in the Complex Quaternion Space .......................................................... 1111
Computing Illuminated Area and Scattering for Double-bounce for SAR Manmade Target’s Characteristic Modeling .................................................................1116
Target Angular Scintillation Measurement of Wide-band Range Comparison Monopulse Radar in Anechoic Chamber ........................................................................1122
Effective Implementation of the CFS-PML Using DSP Techniques for Truncating Dispersive Medium FDTD Domains ..................................................................1127
Continuously Moving Target Simulator Design ..........................................................1131
Accurate Statistical Modeling Method for Dynamic RCS ..............................................1135
A Method for Predicting Far Field Radar Cross-section from Near Field Measurements on Cylindrical Scanning Mode .....................................................................1140
Relationships between Surface Wave Attenuation and the Reflection Properties of Thin Surface Wave Absorbing Layer .................................................................1146
The RF Immunity Characteristics Analysis of SSD Performance due to Wireless Communications Emission in Proximity ...............................................................1151
A Simple High-resolution Imaging System Made of Metamaterials ..............................1156
A Metasurface for RCS Reduction in X Band ................................................................1160
Polarization Conversion and Splitting by Using Thin Reflective Anisotropic Metasurface .............................................................................................1164
Variable Gravitational Mass in the Electromagnetic Field Described with the Complex Quaternion .................................................................1169
Study on Barium Strontium Titanium (BST)-based Metamaterial ................................1174
The Roles of Different NiO Compact Blocking Layers in P-type Sensitized Solar Cells .................................................................1178
Efficient Wide-band Analysis of GPR Antenna Around a Platform Using the Best Uniform Rational Approximation Technique .............................................1182
Electromagnetic Characterization of Tunable Bandpass Filters with a PET-controlled Perturber .................................................................1188
A Combined Method for Computing Installed Radiation Patterns of Antennas on Large Conducting Platforms ........................................................................1192
Multi-scale Electromagnetic Modeling by Integral Equation Domain Decomposition Method with Hybrid Basis Functions .................................1197
Performance Enhancement of RMPA Using ESRR Metamaterial at THz ........................1202
Supercontinuum Generation in Elliptical Silicon Nanowire Embedded Spiral Photonic Crystal Fiber .................................................................1207
Observation and Phenomenological Interpretation of Shifts in Electrical Resonance of Square Shaped Planar THz Split Ring Resonators ..................................................1212

Detector for Nuclear Quadrupole Resonance Spectroscopy .................................................. 1907
Design of Dual Cross Dipole Antennas with Dual Frequencies and Dual Circularly-polarized .... 1911
Design and Study of Multiband Microstrip Antenna .............................................................. 1914
A Compact Dual Band Band-pass Filter Using a New Topology of Transmission Line Metamaterial . 1918
A Novel Wideband Wide-angle Frequency Selective Surface Composite Structure .................. 1922
Highly Birefringent Photonic Crystal Fibers with a High-index Doped Rod .............................. 1926
Nonlinear Optical Loop Mirror-based Linear Cavity Tunable Multi-wavelength Fiber Laser .... 1929
A New Uniplanar Compact Photonic-bandgap (UC-PBG) Structure in Transmission Line ........ 1933
Planar Monopole Antenna for WBAN ..................................................................................... 1936
Dynamics of Many-soliton Molecules in Dispersion-managed Optical Fiber ......................... 1940
Photostimulated Quantum Effects in Quantum Wire with a Parabolic Potential ...................... 1945
The Influence of the Electromagnetic Wave on the Quantum Acoustomagnetoelectric Field in a Quantum Well with a Parabolic Potential ................................................................. 1949
Small Design for Wireless Antenna Used by Ultra-wideband Systems .................................... 1954
Improve the Performance of Multi-users MC-CDMA Based on Critically Sampling Multi-wavelet Transform over Wireless Propagation Channel ................................................................. 1958
Novel Design of H-plane Bandpass Waveguide Filters Using Complementary Split Ring Resonators ... 1963
Indoor Transparent Antenna for Television Reception ............................................................ 1969
Electrical Characterization of GaN .......................................................................................... 1975
Study of p-type Porous Silicon .................................................................................................. 1979
Wideband Antenna for Microwave Imaging .............................................................................. 1983
Propagation of Electromagnetic Waves along a Nonlinear Inhomogeneous Cylindrical Waveguide . 1991
Preliminary Study of Embedded Structural Anomalies in Architectural Structures by Microwave Subsurface Tomography .............................................................................................. 1996
Optimization of Nonlinear Coefficient Map in Back-propagation ............................................ 2001
Generic InP-based Integration Technology: RF Crosstalk in High-capacity Optical Transmitter PICs 2005
Design of an Efficient and a Compact Optical Pulse Compressor Using a Tapered Photonic Crystal Fiber ......................................................................................................................... 2010
Regulating Carriers and Excitons in Simplified Hybrid WOLEDs by Using a Bipolar Interlayer Switch 2014
Formation of Internal Micro-lens-like Structure for Organic Light-emitting Diodes .................. 2018
Optical Properties of Graphene on Quartz and Polyethylene Substrates in Terahertz Frequency Range 2022
Recent Developments in Graphene-based Optical Modulators ................................................ 2026
Anisotropy and Non-reciprocity in Boundary Conditions: Generalized PEMC Surface .......... 2031
The Growth and Magneto-optical Properties of Large Size Single-crystal Thick TmBiIG Films from Lead-free Flux by LPE Technology .................................................................................. 2035
Finite Airy Beam Based on Polymer-stabilized Blue Phase Liquid Crystal ............................... 2041
Resonant Properties of Subwavelength Voids in Anisotropic Metamaterials ............................ 2044
THz Waveguides, Devices and Hybrid Polymer-chalcogenide Photonic Crystal Fibers ............. 2047
The Study on Equivalent Models of Finite-size Carbon Fiber Composite Materials ................. 2052
Wavelength-tunable Dual-concentric-core Photonic Crystal Fibers .......................................... 2057
Multi-channel RZ to NRZ Format Conversion Based on a Single Fiber Bragg Grating .............. 2060
Classification of Chaotic Codes Using Discriminant Analysis Classifiers and Higher Order Statistical Features ........................................................................................................................... 2064
Novel Optical Fast Random Number Generators Based on Integer Domain Chaotic Iterations
Modification of Simplified Modal Method for Subwavelength Triangular Grating with Very High Efficiency
Broadband Measurement of Complex Permittivity for Liquids Using the Open-ended Cut-off Circular Waveguide Reflection Method
Electromagnetic Surface Wave Scattering with Microwaves
On Capacity Performance of $2\times2$ Satellite-earth Link at 30 GHz in Rain Environment
Error in Phase Verification Results for Vector Network Analyzer Measurements in Coaxial Line System
Dielectric Loss at Millimeter Range and Temperatures 300–950 K, and Electrophysical Properties in Diamonds Grown by the Arc Plasma Jet Technology
Coupled Line 180° Hybrids with Modified Trans-directional Couplers
Brush-painted Silver Nanoparticle UHF RFID Tags on Fabric Substrates
On Coordinated Multi-Point Transmission for Cellular Environments
Path Loss Model with Multiple-antenna
Coordinated Multi-Point MIMO Processing for 4G
Multiple Input Multiple Output System with Multi User Support Based on Directive Information Transmission
Channel Capacity Experiment of a Polarization Controlled MIMO Antenna for Wearable Applications
Non-stationarity Characterization for Vehicle-to-vehicle Channels Using Correlation Matrix Distance and Shadow Fading Correlation
On Effective Gain Variability with Antenna Orientation
Broadband Channel Measurements inside Metro Station
Impact of Shadowing Correlation on Microdiversity and Marcodiversity of Cellular System in High-speed Railway Environments
A Novel 3D Ray-tracing Acceleration Technique Based on Kd-tree Algorithm for Radio Propagation Prediction in Complex Indoor Environment
Similarity Measure of Fading Profiles of Different Antenna States of Reconfigurable Antennas
Algorithms for Indoor Localization on WLAN Networks Applications
Three Dimensional (3D) Electromagnetic Field Distributions in the Air and Relative Diversity Gain
Analysis and Design of Beam-scanning Reflectarray with Circular Polarization
A Novel Hybrid Reconfigurable Antenna for Portable Wireless Terminal Applications
Novel Hepta-band Coupled-fed Antenna for WWAN/LTE Metal-ring-frame Smartphone Applications
A Hepta-band WWAN/LTE Antenna Design for Metal-rimmed Smartphone Applications
Printed Multi-band Slot Antenna Surrounded by a Metal Ring for WWAN Smartphone Applications
Tunable Antenna Introductions, Challenges and Opportunities
A RFID Tag Based on MIT Technology
Design of Robust UHF RFID Tag Antenna for Free-space and Metal Surface
Modified Miniature Tri-band CPW-fed Antenna for RFID Applications
Study of $\text{CO}_2$Z Hexaferrite Magnetodielectric Material as Substrate for RFID Reader Antenna
A Novel Fully Printed 28-bits Capacity Chipless RFID Tag Based on Open Conical Resonators
FEM Analysis of Conical Type Coaxial Open-ended Probe for Dielectric Measurement
FDTD Analysis of Digitally-modulated Electromagnetic Wave Propagation in Human Head
Microwave Technology Based Medical Imaging and Diagnostics
Using Functional Near-infrared Spectroscopy to Investigate Frontal Cortical Response to Joint/non-joint Attention in Children
Tunable S-band RF Front End Receiver for LEO Mission ............................................. 2240
Dual Band Rectangular Dielectric Resonator Antenna Design .................................. 2244
Gain Enhanced UWB Dielectric Resonator Antenna .................................................. 2248
Electromagnetic Modeling and Simulation for Packaging Structures with Lossy Conductors 2252
A Numerical Study on 2D Photonic Crystal Devices for Millimeter and Terahertz Wave Applications 2256
Advance of Research on Coaxial Relativistic Backward Wave Oscillator ....................... 2261
Reduction of Bend Losses at Sharp Bend in Post Wall Waveguide ................................ 2268
The Squarax Amplifier: An Electromagnetic and Thermo-mechanical Innovation ............ 2273
Injection Phase-locking of a High-power Transit-time Oscillator ................................. 2281
Optimization of Nanostructured Lüneburg Lens Based on the Transformation Optics Method 2286
670 W Single-frequency Retrievable Multi-tone All-fiber MOPA ................................ 2289
The Frequency Gap and SNR Improvement for Self-seeded Multi-wavelength Brillouin-Erbium Fiber Laser ............................................................. 2294
Product Trends of Optical $E$-field Sensor ................................................................. 2298
Ultrabroadband Infrared Spectroscopy by Chirped Pulse Upconversion ......................... 2302
Analysis and Design of the Dielectric Yagi-Uda Nanoantenna with a Double Driven Element 2306
Using Multiple-precision Arithmetic to Prevent Low-frequency Breakdowns in the Diagonalization of the Green’s Function ......................................................... 2311
Properties of the Gram Matrices Associated with Loop-flower Basis Functions ............... 2316
Intelligent Channel Assignment for WI-FI System Based on Reinforcement Learning ......... 2322
Analysis of Conditions on the Boundary between Layers ............................................. 2326
Fast Calculation of $T_2$ Relaxation Time in Magnetic Resonance Imaging ...................... 2331
Measuring and Application of NIR Light Absorption Coefficient of Bacteria ................. 2336
Using Diffusion-weighted Images to Identify Brain Tumors ........................................ 2340
Partial Discharge Detection and Localization System .................................................. 2344
Numerical Model of a Large Periodic Structure .......................................................... 2350
Optimization of the Particle Swarm Algorithm ............................................................ 2355
Sensitivity Improvement in NQR Based Detection Methods ........................................ 2360
A Dark Matter Model to Unify Gravity and Electromagnetism .................................... 2365
Interactive Segmentation of Hip Joint Cartilage ......................................................... 2369
PIERS: Progress In Electromagnetism — Relativity Superseded .................................. 2373
PO-GO/ECM for Bistatic RCS Modeling of Complex Objects over Rough Sea Surface .......... 2376
Study on the Variation Characteristics of Land Desertification in Ebinur Lake Basin ........... 2382
Analysis of EVI and NDVI Characteristics in Different Land Cover Types in Liaoning Province 2386
Minkowski Fractal Antenna Design with DMS-SRR and DGS-SRR Structure for WLAN Application 2391
Equivalent Circuit Model of Different Configurations of Loop Elements Using Vector-fitting 2395
Antenna Reconfiguration Using Metasurfaces ............................................................. 2400
Metamaterial Surfaces for Integrated Multiband Horn Applications .............................. 2405
Nonlinear Optical Properties of Gold Nanorods (GNRs) under FS Laser Excitation near the Third Optical Tissue Window and Application for Multichannel Cellular Imaging .......................... 2409
Near-infrared Fluorophore-doped Nanoparticles for in vitro and in vivo Bioimaging .......... 2413
A Photostable AIE Luminogen for Multifunctional Three-photon Bioimaging .................. 2417
Tuned Window for Standing Wave Linear Accelerators ............................................... 2421
Simulation and Design of Monolithically Integrated Tunable Wavelength Converter Based on V-cavity Laser and Delayed Mach-Zehnder Interferometer ....................................................... 2499
Bandgap Engineering of InGaAsP/InP Multiple Quantum Well Structure by Dielectric Sputtering ................................................................. 2435
High Stable Exciton Emission from SnO2 Quantum Dots Grown via a Facile “Top-down” Strategy ................................................................. 2438
Design and Simulation of 450 nm GaN-based Multiple-quantum-well Tunable V-cavity Laser ................................................................. 2441
Shaping the CPML Absorbing Boundary Condition to Eliminate Impinging Light at a Specific Position inside Electromagnetic Simulations ......................................................... 2445
Optical Investigation of Nd3+-sensitized Upconversion Nanoparticles for Damage-free in vivo Deep Imaging and in vitro Microscopy ......................................................... 2450
Tradeoff Study of Microwave Imaging Based on Frequency Considerations ................................................................................................................................. 2455
Study on the Scattering Properties of an Artificial Electromagnetic Hard Surface ................................................................................................. 2458
A Realization Compact Pseudo Chebyshev Low Pass Filters for UHF Band Using RF MEMS Technology ................................................................. 2462
Miniaturized Microscript Bandpass Filter Based on the Twist Split Ring Resonators ................................................................................................. 2469
Improvement of Oblique Incidence Performance for a Microwave Absorber Based on Magnetic Polymer Composites ................................................................................................................................. 2473
Metamaterial Based Patch Antenna with Broad Bandwidth and Simple Structures ................................................................................................. 2478
Coherent Beam Combining of Two Tm-doped Fiber MOPAs with Output Power of 50 W ................................................................................................. 2483
Numerical Investigation of a Novel Two-stage Structure to Compress Spectrum and Suppress Pedestal Employing a DIF Interconnected with a HNLF-NOLM ................................................................................................. 2487
Cr2+: ZnSe Crystal Based High Power Passively Q-switched Tm-doped Fiber Laser ................................................................................................. 2492
Through-Silicon-Via Pairs Modelling via Compressed Sensing ................................................................................................................................. 2496
Method to Reduce Coupon Lengths for Transmission Line S-parameter Measurements through Elimination of Guided-wave Multiple Reflections ................................................................................................. 2502
Performance Evaluation of an OFDM-based BPSK PLC System in an Impulsive Noise Environment ................................................................. 2510
Effects of Focusing on Scintillations of Higher Order Laser Modes in Non-Kolmogorov Turbulence ................................................................................................. 2514
Nonparaxial Propagation of Complex Variable Function Cosh-Gaussian Beams ................................................................................................. 2517
M2-factor for the Partially Coherent Elegant Laguerre-Gaussian Beam Propagating through the Turbulent Ocean ................................................................................................. 2521
Microstrip Diplexer Design Using Three EBG ................................................................................................................................................................. 2525
Wide-stopband Millimeter-wave BPF on GaN MMIC Using Asymmetric Feeding Structure ................................................................................................. 2529
Substrate Integrated Waveguide Frequency Reconfigurable Filter Controlled by Magnetic Field ................................................................................................. 2533
Additional Cross Coupling Coefficient Used as Matching Ladder Network in Coupled Based Band Pass Filters ................................................................................................................................. 2537
High Efficiency TM01-mode Cylindrical Waveguide Microwave Reactor for Microwave Material Continuing Processing ................................................................................................. 2541
A Double Ended Active Electrode Using SiP with DC and 50 Hz Rejection ................................................................................................................................. 2546
Simulation of a High-convergence Electron Optics System for an X-band High-impedance Relativistic Klystron ................................................................................................................................................................. 2550
The Metamaterial Technology Applied to Planar Antennas ................................................................................................................................................................. 2556
Analysis and Design of the Switched-beam Antenna Array for Automotive Radar Applications ................................................................................................................................................................. 2561
Compact Printed Ultra-wide Band Antenna with Band-notched Characteristics ................................................................................................................................. 2565
A Triangular Antenna with Spiral Slot Arrays for Beidou Navigation ................................................................................................................................................................. 2570
A New Spiral Antenna with Improved Axial Ratio and Shorted Arm Length ................................................................................................................................. 2575
Tri-band Dual-polarized Multilayer SAR Microstrip Antenna ................................................................................................................................................................. 2579
A Multiple-notch UWB Printed Slot Antenna with CNSS Enhanced ................................................................................................................................................................. 2583
