

The Study of Effective Permittivity and Permeability of Curved Meta-materials

F. Yu¹, J. Wu², and J.-P. Song¹

¹Xi'an Jiaotong University, China

²China Research Institute of Radiowave Propagation, China

A new structure of metamaterials which is characterized by curved wires and SRRS, calculate permeability and magnetic permeability of artificial media using Perturbation Theory, simulated effective permittivity and permeability of curved Meta-materials, find which radius of curvature the negative effective permittivity and permeability could appear.
